ILLUMINATOR TIMERS

**Model: TPS-120
for 120 VAC supply**

**Model: TPS-240
for 240 VAC supply**

Models TPS-120 & TPS-240 Illuminator Timer allows illuminator lamps to light only when gage water levels are being observed. Maintenance costs are reduced significantly due to far fewer

lamp changes. Added savings occur in lower electricity consumption and fewer lamp purchases. The timer can be set to light lamps for periods up to 3 minutes. Timers are designed to operate up to 10 AMPS of lighting circuits. Dimensions: 5³/₄" x 3¹/₄" x 2³/₄"

***Can be used with all Water Gage Illuminators.**

LOW WATER CUT OUT BYPASS SWITCHES

Model HS-0

Holding Switch Without Light

Model HS-1 (for 120 VAC)

Model HS-1-30 (for 30 VAC,

for Electro Eye-Hye applications with ECIL control units)

Holding Switch With Light

During probe column or Levalarm blow-down, the Holding Switch provides a bypass around the low fuel cut-out switch. This simple switch maintains relay circuit continuity momentarily, while being held in the bypass position during blowdown. The Holding Switch also provides an indicator light to verify that the fuel cut-out relay is functioning properly. The switch can be installed to operate with probe-type Levalarms on columns, boilers or tanks. Also available without indicator light (Model HS-0).

Dimensions: 4" x 3" x 2¹/₂"

TEST SWITCH FOR ELECTRO EYE-HYE SYSTEMS

Model ECTSLR for up to 12 probe systems

Model ECTSLR-2 for 13 to 20 probe systems

A Test Switch can be furnished that provides rapid status of Control Unit circuitry and Indicator lamps. Specify ECTSLR or ECTSLR-2. Designed to be compatible with ECIL Series Control Units.

Dimensions: 5³/₄" x 3¹/₄" x 2³/₄"

POWER SUPPLY DIVERTERS

Model PSD-120 for 120 VAC supply

Model PSD-240 for 240 VAC supply

Any Clark-Reliance Relay Control Unit can be wired to operate from two power sources. Operation can switch automatically between power sources A and B in the event of an outage. Each power source is fused at 5 AMPS. Each fuse is accessed from front of the unit. A push button permits the momentary testing of the standby power source. Visual illumination provides indication of the power source in use. Dimensions: 8" x 3¹/₄" x 2³/₄"

BACK UP 12 VDC SUPPLY

Model ECIV-13

This device accepts 120 VAC supply as a primary power source and 12 VDC as a back-up source. If the primary source is interrupted, the back-up source is rectified into 120 VAC and continues to power the control system. The amount of back-up time is dependent upon the load and battery size. *Note: Battery not included.* This device has a 100 watt capacity, and can be applied to any Clark-Reliance Control Unit.

Dimensions: 7" x 7" x 10"

AUDIBLE ALARM HORNS

Standard Model H350N (for 120 VAC)

Standard Model H350NA (for 240 VAC)

Weatherproof Model H350W (for 120 VAC)

Weatherproof Model H350WA (for 240 VAC)

Audible alarms are available for all Levalarm applications. The vibratory horn has a decibel rating of 100DB at 10 ft. and comes in standard or weatherproof models. Dimensions: 4³/₄" x 4³/₄" x 2¹/₂"

VISUAL ALARM INDICATORS

Model LI-2

Two Light Indicator for High & Low Alarm Applications

Two Light Alarm Light Indicator designed for 120 VAC or 240 VAC supply. Designed to indicate High and Low Alarm levels. Dimensions: 5³/₄" x 3¹/₄" x 2³/₄"

Model LI-3

Three Light Indicator for High, Normal & Low Display Applications

Three Light Indicator designed for 120 or 240 VAC supply. Designed to indicate High and Low Alarms and Normal Water Level. Dimensions: 8" x 3¹/₄" x 2³/₄"

Consult Clark-Reliance with any additional Application Engineering questions, concerning the compatibility of these accessories with your existing equipment.
