

## Problem

Premature Failure of Diesel Fuel Additive Pump

## Solution

Filtration of new fuel additives from truck offloading into point of use storage tanks. Filters are installed in line with fuel additive metering pump.

(2) 10-micron filters and OFS housings are installed after the spill containment infill boxes and then the fluid driven additive injectors meter in TPx HD in a 1:2000 ratio to the main fuel tank. Filters protect the non-air, non-electric pumps valued at \$7500 each.

Mine in Southern California

## Results

This fuel additive helps the mine reduce fuel consumption by 5% and extends fuel injector life.
